

General performance of the 384 SNPs on F2 populations

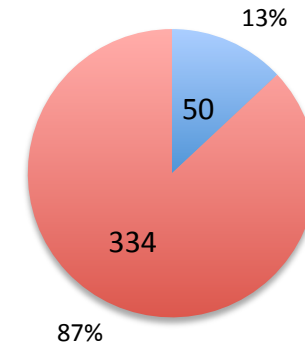

Cvi x Löv

Eden1 x Tamm2

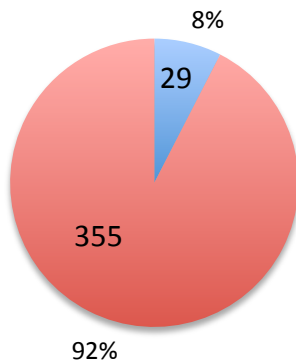

T450 x Ilmei32

In red: SNPs behaving well

In blue: SNPs showing no signal, non mendelian segregation, number of calls < 90 (out of 96)

Consensus

The general performance of the 384 SNPs depends on the samples DNA quality and on the nature of the tested population
